The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation) M.J Duff

A unified theory embracing all physical phenomena is a major goal of theoretical physics. In the early 1980s, many physicists looked to eleven-dimensional supergravity in the hope that it might provide that elusive superunified theory. In 1984 supergravity was knocked off its pedestal by ten-dimensional superstrings, one-dimensional objects whose vibrational modes represent the elementary particles. Superstrings provided a perturbative finite theory of gravity which, after compactification to four spacetime dimensions, seemed in principle capable of explaining the Standard Model. Despite these major successes, however, nagging doubts persisted about superstrings. Then in 1987 and 1992 the elementary supermembrane and its dual partner, the solitonic superfivebrane, were discovered. These are supersymmetric extended objects with respectively two and five dimensions moving in an eleven-dimensional spacetime.

Over the period since 1996, perturbative superstrings have been superseded by a new nonperturbative called M-theory, which describes supermembranes and superfivebranes, subsumes string theories, and has as its low-energy limit, eleven-dimensional supergravity. M-theory represents the most exciting development in the subject since 1984 when the superstring revolution first burst on the scene.

The first book devoted to M-theory, *The World in Eleven Dimensions: Supergravity, Supermembranes and M-Theory* brings together seminal papers that have shaped our current understanding of this eleven-dimensional world, from supergravity through supermembranes to M-theory. Each chapter includes commentaries intended to explain the importance of these papers and to place them in a wider perspective. Each chapter also has an extensive bibliography. The book is of interest to researchers and postgraduate students in particle physics, mathematical physics, gravitation, and cosmology.

From reader reviews:

Barbara Jones:

In this 21st century, people become competitive in every single way. By being competitive now, people have to do something to make these individuals survive, being in the middle of the actual crowded place and notice by simply surrounding. One thing that occasionally many people have underestimated it for a while is reading. Yeah, by reading a book your ability to survive rises then having a chance to stand than others is high. For you personally who want to start reading a book, we give you that *The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation)* book as a starter and daily reading publication. Why, because this book is more than just a book.

Michael Brown:

Reading an e-book tends to be a new life style in this particular era of globalization. With examining you can get a lot of information that will give you benefit in your life. Using books everyone in this world can certainly share their ideas. Guides can also inspire a lot of people. Many authors can inspire their very own readers with their stories or perhaps their experiences. Not only the stories that are shared in the publications, but also they write about the ability to do something that you need an instance. How to get a good score on TOEFL, or how to teach children, there are many kinds of books which exist now. The authors on earth always try to improve their talent in writing, they also do some exploration before they write with their books. One of them is this *The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation)*.

Tasha Banda:

People live in this new day time of lifestyle and always try to and must have the spare time or they will get a large amount of stress from both day to day life and work. So, whenever we ask do people have spare time, we will say absolutely sure. People are human not just a robot. Then we consult again, what kind of activity are there when the spare time is coming to anyone of course your answer will be unlimited right. Then ever try this one, reading textbooks. It can be your alternative throughout spending your spare time, the actual book you have read is usually *The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation)*.

Wanda Pence:

Within this era which is the greater particular person or who has ability in doing something more are more important than others. Do you want to become one among them? It is just a simple way to have that. What you need to do is just spending your time not very much but quite enough to have a look at some books. On the list of books in the top record in your reading list will be *The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation)*. This book that is qualified as *The Hungry Hills* can get you closer in turning into a precious person. By looking right up and

review this e-book you can get many advantages.
