Chemical Rocket Propulsion: A Comprehensive Survey of Energetic Materials (Springer Aerospace Technology)

Chemical Rocket Propulsion: A Comprehensive Survey of Energetic Materials (Springer Aerospace Technology)

Developed and expanded from the work presented at the New Energetic Materials and Propulsion Techniques for Space Exploration workshop in June 2014, this book contains new scientific results, up-to-date reviews, and inspiring perspectives in a number of areas related to the energetic aspects of chemical rocket propulsion. This collection covers the entire life of energetic materials from their conceptual formulation to practical manufacturing; it includes coverage of theoretical and experimental ballistics, performance properties, as well as laboratory-scale and full system-scale, handling, hazards, environment, ageing, and disposal.

Chemical Rocket Propulsion is a unique work, where a selection of accomplished experts from the pioneering era of space propulsion and current technologists from the most advanced international laboratories discuss the future of chemical rocket propulsion for access to, and exploration of, space.

It will be of interest to both postgraduate and final-year undergraduate students in aerospace engineering, and practicing aeronautical engineers and designers, especially those with an interest in propulsion, as well as researchers in energetic materials.

From reader reviews:

Madeline Williams:

Your reading sixth sense will not betray a person, why because this Chemical Rocket Propulsion: A Comprehensive Survey of Energetic Materials (Springer Aerospace Technology) reserve written by well-known writer who knows well how to make book which can be understand by anyone who else read the book. Written with good manner for you, leaking every ideas and writing skill only for eliminate your own hunger then you still doubt Chemical Rocket Propulsion: A Comprehensive Survey of Energetic Materials (Springer Aerospace Technology) as good book not merely by the cover but also with the content. This is one reserve that can break don't determine book by its deal with, so do you still needing a different sixth sense to pick that!? Oh come on your studying sixth sense already alerted you so why you have to listening to another sixth sense.

Lavada Rowlett:

This Chemical Rocket Propulsion: A Comprehensive Survey of Energetic Materials (Springer Aerospace Technology) is great reserve for you because the content that is certainly full of information for you who always deal with world and have to make decision every minute. That book reveal it info accurately using great organize word or we can claim no rambling sentences included. So if you are read the item hurriedly you can have whole data in it. Doesn't mean it only provides straight forward sentences but hard core information with attractive delivering sentences. Having Chemical Rocket Propulsion: A Comprehensive Survey of Energetic Materials (Springer Aerospace Technology) in your hand like finding the world in your arm, information in it is not ridiculous one. We can say that no e-book that offer you world throughout ten or fifteen minute right but this publication already do that. So , it is good reading book. Hello Mr. and Mrs. busy do you still doubt that?

Virginia Hause:

With this era which is the greater particular person or who has ability to do something more are more precious than other. Do you want to become considered one of it? It is just simple method to have that. What you should do is just spending your time not very much but quite enough to enjoy a look at some books. One of the books in the top collection in your reading list is definitely Chemical Rocket Propulsion: A Comprehensive Survey of Energetic Materials (Springer Aerospace Technology). This book that is certainly qualified as The Hungry Inclines can get you closer in becoming precious person. By looking right up and review this guide you can get many advantages.

James Melendez:

A lot of guide has printed but it differs. You can get it by web on social media. You can choose the most effective book for you, science, witty, novel, or whatever simply by searching from it. It is identified as of book Chemical Rocket Propulsion: A Comprehensive Survey of Energetic Materials (Springer Aerospace

Technology). You can add your knowledge by it. Without making the printed book, it may add your knowledge and make anyone happier to read. It is most significant that, you must aware about book. It can bring you from one spot to other place.
