Coal and Coke Mixtures as Water-Gas Generator Fuel (Classic Reprint) W W Odell

Excerpt from Coal and Coke Mixtures as Water-Gas Generator Fuel

The experiments conducted at Streator, in 1918, in operating a 6-foot set 6 to 7 hours a day did not solve some of the important questions in the use of coal fuel, namely, the effect of a stand-over period on capacity and possibilities in the use of the blow-run method of operating with mixed fuels, coal and coke. The chief purpose of this paper, therefore, is to present information bearing on these problems and the results obtained during six weeks of experiment at Davenport, Iowa, using mixed generator fuel with the blow-run method of operating. Data are included on the behavior of the various fuels used in the generator, the clinker conditions, the use of fuel high in ash, and on the use of coal high in sulphur.

About the Publisher

Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com

This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition.
