Global Climate Change and U.S. Law

Global Climate Change and U.S. Law

A vast body of U.S. law relevant to climate change has developed since publication of the first edition of *Global Climate Change and U.S. Law* in 2007, even while Congress has failed to pass a new comprehensive statute to address the climate challenge. This domestic legal regime, covered comprehensively in this updated volume, consists of federal greenhouse gas regulations issued under the Clean Air Act and federal energy efficiency statutes, new disclosure requirements imposed under the securities laws, as well as a variety of state and local initiatives and common law decisions by the courts. Recognizing that climate change is largely an energy problem, this edition adds a completely new section on energy regulation. Additional chapters now cover cap-and-trade regimes, climate-related water issues, agriculture and forestry, and the use of non-climate international agreements to reduce emissions and address climate impacts. The final new section focuses on issues previously seen as marginal but now of growing importance: climate adaptation, carbon capture and sequestration and geoengineering.

Part I: Overview and Context

Part II U.S. Federal Regulation and Litigation

Part III: Regional, State, and Local Actions

Part IV: Energy Regulation

Part V: The Next Legal Frontiers
