The International Space Station: Commercial Utilisation from a European Legal Perspective (Studies in Space Law)

Currently, perhaps the most complicated and challenging undertaking in outer space is the building of the International Space Station, the ISS. The recent decision to use the ISS also as a facility for pre-commercial research and development in a microgravity environment, inviting commercial enterprise on board, only enhanced such complications and challenges. As a consequence, the major question arises to what extent these are held in check by a sound and effective legal and regulatory regime, e.g. pertaining to criminal liability or intellectual property rights. The present book offers the first overview of applicable law and regulation which is not merely superficial, as well as some directions for future legislative and regulatory developments, written by a number of highly reputed experts in space law. The analysis, finally, is with a clear focus on the European situation in view of the particularities which increasing ESA and EU involvement in space activities bring with them.
