Wind Turbine Noise R. Bowdler and G. Leventhall

Noise from wind turbines is a major constraining factor in the location of turbines. A recent survey in the Netherlands showed that sound was the aspect of wind turbines which led to most complaints. Investigation, understanding and reduction of noise from wind turbines is a necessary progression in the development of this sector of renewable energy. This book, authored by an international group of experts, reviews current knowledge, providing an objective and accurate assessment of all aspects of wind turbine noise. While the primary audience for this book is the scientific regulatory and planning community, it will also be of great value to those in the wind power industry itself, the broader power supply industry, to environmental organisations, academics and others with an interest in renewable energy
